

Wood Flooring System

PRODUCT SHEET

HAWORTH®

The Haworth Wood Flooring System combines the practical benefits of raised access floors with the flexibility of finishes that magnetically connect to its surface. The system's innovative wood planks with magnetic backs easily apply to the surface of Haworth raised access steel top sheet panels, allowing unrestricted access to underfloor utilities and easy reconfiguration. A wide range of finish options and custom capabilities enhance design freedom in high-impression spaces.

Elegant Expression

The Wood Flooring System is a unique and elegant visual highlight. The flooring planks are designed to create distinctive applications throughout a workplace, from lobbies and leadership spaces to executive boardrooms, residential applications, and more.

Design Freedom

The Wood Flooring System opens up virtually unlimited design possibilities. The magnetic planks can be easily laid in unique patterns that reflect your design vision and can be cut and configured to precisely fit the space. They can also be reconfigured to change the floor design as the needs of your space evolve. Choose from a wide selection of finishes or specify your own custom veneers, stains, effects, and other features.

High Performance

The modular system provides complete and easy access to the building infrastructure below. Because the planks are magnetic and easy to lay in, the floor installs 30 percent faster than traditional tongue and groove solutions that require adhesives, and can be walked on immediately after installation. This shortens construction schedules, reduces down-time, and minimizes costs. Should a plank be damaged, it can be easily lifted out and replaced, without disrupting the rest of the floor.

The Wood Flooring System must be used in a humidity controlled environment that ranges from 40-60% relative humidity.
