

Haworth DesignIT

ADDING A PRODUCT CATALOG

Haworth DesignIT Tutorial

Adding a Product Catalog

After you have installed the DesignIT menu, you will need to add in the product catalogs that you would like to use. DesignIT was built to allow users to download individual product catalogs without having to download the entire Haworth offering. This means that you will need to download the catalogs you wish to use from www.haworth.com.

Installing Product Catalogs

You must download the product catalog data to populate the tool before you will be able to access the content. If you try to click on one of the menu items before you download content an error message (example below) will appear.

To correct this problem please complete the following steps. For the purpose of this document we will use the Beside Storage (RSS) offering as an example.

- 1) First download the Beside Storage (RSS) product catalog .exe file (**DesignIT-Haworth - Beside Storage.exe**) from www.haworth.com.

Symbols - Product Line or Category

DesignIT CAD Symbol Libraries

- 2) Once downloaded, double click on the self-extracting zip file **DesignIT-Haworth - Beside Storage.exe**. A dialog box should appear as shown below.

Adding a Product Catalog

3) In the Extract to: file, make sure to type in C:\. Not typing C:\ could install the files into an unknown or unwanted location on your hard drive.

NOTE

If directory is replacing existing files, overwrite all existing files.

That should do it! Now you can start AutoCAD and utilize the DesignIT Tool and begin inserting Haworth supplied symbols. To load more products simply follow the above steps. To make the tool most effective please visit www.haworth.com to download updates and new product lines as they are made available. Updates to this content will be posted monthly. Remember to please work with your location Haworth dealer to obtain pricing or to specify finishes.
