

# Compose Connections™

## Spine-Based Workspaces

As the nature of work changes, organizations face new challenges in planning spaces for the different ways people work. Today's workspaces must be highly dynamic to support a variety of collaborative and individual workstyles. Compose Connections efficiently enables change, choice, and user control in open-plan environments. This independent, spine-based system creates light-scale workspaces that accommodate a range of storage options and any freestanding tables. It also works with Compose panel-based components for smooth transitions and expansion of application possibilities.

### Designed for Workspace Adaptability

Compose Connections combines the power and data management of a panel system with a minimalist, light-scale aesthetic to create personal workspaces that can adapt to suit your ever-changing needs. Freestanding desks and fixed, height-adjustable, or mobile tables can be arranged as needed anywhere along the spine, with easy access to power and connectivity at each workstation. Other worksurfaces, as well as screens and storage components can be attached to the spine, and compatibility with Compose® panels allows customers to easily transition from a traditional panel environment to a more open, collaborative design.

### Features

Utilizing the flexibility of a spine-based system, Compose Connections optimizes open plans with a variety of workstation options that cater to the diverse needs of today's workstyles, while offering a clean, contemporary look.

**Light-scale design** – Uses a 16"-high partition, offering a spine-based solution with reduced materiality and a more open feel than traditional panel systems.

**Easy power and data access** – Enables people with full access to power, technology, and connectivity at any workspace location along the spine.

**Configuration flexibility** – Independent, off-modular design allows freestanding tables, fixed surfaces, and screens to be placed at any point, with additions, or removals as needed.

**Freestanding applications** – Compatible with a variety of accessories, storage, tools, and worksurfaces—including Belong™ work tools, Belong Plus tackable screens, Active Components™ and X Series® storage, and any height-adjustable tables—Compose Connections stands on its own or as a centerpiece with complementary elements used around it.

**Versatile common components** – Uses the same work rail top trim as Compose Beam and Compose 26" spine-based systems, providing compatibility with the same worksurfaces, tables, and screens; connects with Compose panels, as well.

### Colors, Materials, Finishes

Compose Connections uses many of the same components and visually harmonizes with the Compose Beam and Compose 26" spine-based workspace applications. All surface materials and finishes that can be applied to Compose can be applied to Compose Connections, offering the choice to seamlessly blend into the environment or create a focal point.
